

This CIS certified policy for Microsoft Windows Server 2022 is based on the CIS Benchmark for Microsoft Windows Server 2022, v3.0.0. The policy contains all Level 1 - Member Server Automated and Manual types of checks from the benchmark. The controls within the policy are configured on the basis of values provided by CIS benchmark. As this policy and the controls within the policy are certified by CIS, the policy is LOCKED for prohibiting any changes to the controls or their configuration values. If the organizational security policy requires different configuration values or changes to the policy, please make a copy of this policy and modify the control configuration values as per the needs of the organization's security policy.

In the case of CIS-required Control duplication (where a Control requirement appears in more than one section of the benchmark), Qualys Policy Compliance Policy Editor limits the existence of any Controls within a single policy to one (1) occurrence of each control.

CIS has stated that these settings should be considered as minimum allowable values; if an Organization requires more stringency than the CIS minimum, these more restrictive and/or stringent values shall all be considered as a PASS. The settings assigned to any given control by CIS are not guaranteed to be appropriate for any particular environment and all settings should be reviewed and applied according to the needs of the business. Before you apply the recommendations from the policy, check the relevant vendor documentation to avoid discrepancies. Also, it is recommended that these values be tested before applying to the Production Environment.

All ports will remain closed when the network interface (Public, Private, or Domain) is set to Block. For the remote scans to succeed, the network interface should have appropriate Inbound rules configured via Local Group Policy --> Windows Firewall with Advanced Security --> Inbound Security Rules.

- 1) TCP/UDP inbound ports: 135,137,445,389 (Qualys port scan)
- 2) UDP inbound ports: 135,137,445,389 (Qualys port scan), and
- 3) Remote Desktop: 3389 (prerequisite for RDP connections)

Additional Information:

- A. The following 'Manual' types of checks from the CIS benchmark is set as INACTIVE in the policy.
CIS Ref #1.2.3 (L1) Ensure 'Allow Administrator account lockout' is set to 'Enabled'
CIS Ref #2.3.11.6 (L1) Ensure 'Network security: Force logoff when logon hours expire' is set to 'Enabled'

- B. According to CIS guidelines, the following requirements should be reviewed. If the organization is not using the specified method or tool as outlined in the CIS Benchmark to meet a particular requirement, then the organization must provide evidence that an alternative tool or method satisfies the requirement. Consequently, it is also recommended to review the associated Qualys controls for these requirements.
CIS Ref #18.9.25.1, 18.9.25.2, 18.9.25.3, 18.9.25.4, 18.9.25.5, 18.9.25.6, 18.9.25.7, 18.9.25.8, 18.9.51.1.1

- C. According to CIS guidelines, the following requirements should be reviewed, As security concern applies to any cloud-based file storage application installed on a server, not just the one supplied with Windows Server.
CIS Ref #18.10.50.1

- D. According to CIS guidelines, the following requirements should be reviewed. The user right should generally be restricted to the Administrators group. Assign this user right to the Backup Operators group if your organization requires that they have this capability.
CIS Ref #2.2.8

CAUTION: Remote connection requirements may vary from one setup to another. It is important to note that multiple unsuccessful authentications could result in LOCKING OUT the user account running the scans.
